Accepted April 2009

Abstract

Purpose – The purpose of this paper is to examine the branding and communications strategy of the International Committee of the Red Cross (ICRC). The ICRC is the world's oldest non-religious organisation dedicated to humanitarian relief. The ICRC's remit includes civilian and military victims of armed conflicts and internal disturbances, as well as human rights issues that transcend conflict situations, such as disaster response and preparedness, health and care in the community and humanitarian principles and values. The ICRC is the founding body of the International Red Cross and Red Crescent Movement and coordinates the efforts of the National Societies and their International Federation.

Design/methodology/approach – Various secondary sources are used to collate the information from which the case study is developed.

Findings – The ICRC's longevity is attributed to its ability to evolve, albeit at times slowly. However, the environment in which the ICRC operates is changing rapidly. Like many international non-profit organisations, the ICRC faces considerable challenges to ensure it remains relevant by responding to the shifting environment in a flexible and creative manner. Consequently, the ICRC's communication efforts have become increasingly important.

Originality/value – The case study provides the opportunity to examine the branding and communications strategy for a prominent non-profit organisation.

Keywords Brand identity, Branding, Marketing communications, Non-profit organizations, International organizations

Paper type Case study

Introduction

The International Committee of the Red Cross (ICRC), established in 1863, is a neutral organisation that works towards ensuring humanitarian protection. The ICRC (2005a), head-quartered in Geneva, Switzerland, operates in more than 80 countries and employs more than 12,000 staff. It is the world's oldest non-religious organisation dedicated to humanitarian relief and it has a unique place in international law. The ICRC acts as the custodian of the Geneva Conventions and promotes adherence to International Humanitarian Law (IHL); it is identified by the four 1949 Geneva Conventions as an impartial humanitarian body (Casey and Rivkin, 2005). The ICRC is mandated to assist victims of war and violence (Forsythe, 2005) and because of its mandate and legal status, it is distinct from intergovernmental agencies, such as United Nations organisations, and from non-governmental organisations (NGOs). The agreements the ICRC establishes with the authorities of the countries in which its delegations and missions

work, means the ICRC avails of immunities and privileges, which preserves its neutrality and freedom ICRC (2005a).

Humanitarian network and mission

The movement

The Red Cross and Red Crescent Movement, also known simply as the Movement, encompasses three independent bodies: the ICRC, the International Federation of Red Cross and Red Crescent Societies (IFRC) and the 186 National Societies. Each body has its own status and none have authority over the other (Quelch and Laidler-Kylander, 2003). Together, the bodies work to uphold seven fundamental principles: humanity, impartiality, neutrality, independence, voluntary service, unity and universality. The principle of humanity forms the central purpose of the Movement's activities, which is "to prevent and alleviate human suffering, without discrimination, and to protect human dignity" (ICRC, 2005a, p. 9).

IFRC works with National Societies in responding to catastrophes and co-ordinating development programmes with respect to disaster preparedness, health care and the promotion of humanitarian values (IFRC, 2007). The National Societies form the core of the Movement, which encompass 97 million volunteers, who "provide a wide variety of services, ranging from disaster relief and assistance for the victims of war, to first aid training and restoring family links" (IFRC, 2007, p. 5). The volunteers support public authorities and their local knowledge enables the Movement to give assistance where it is required. Indeed, "National Society volunteers are often the first on the scene when a disaster strikes and remain active within affected communities long after everyone else has come and gone" (IFRC, 2007, p. 5). It is this network of community-based volunteers that gives the Movement a distinct advantage in addressing humanitarian challenges.

The ICRC manages the efforts of the National Societies and their International Federation and, in times of conflict, it is the lead agency to coordinate relief activities. In addition to humanitarian coordination and diplomacy, the ICRC assists dispersed families, individuals deprived of their freedom, as well as the wounded and sick of existing or emerging conflict (ICRC, 2007b). The ICRC's delegations and missions primarily employ nationals of the countries in which it works. In turn, these nationals provide invaluable insights to their country's socio-political context. Moreover, the ICRC's field research for producing:

[...] its budget projections for the following year is so thorough and impressive that it really constitutes an early warning system for humanitarian crises; [...] Alert diplomats [pay] careful attention to these ICRC budgetary reports as an early warning indicator (Forsythe, 2005, p. 312).

Unique position

The ICRC initially focused on the welfare of wounded soldiers in international war. However, it has extended its remit to include "civilian and military victims of armed conflicts and internal disturbances" (ICRC, 2005a, p. 1), as well as "human rights issues that transcend conflict situations" (Forsythe, 2005, p. 2), such as "disaster response, disaster preparedness, health and care in the community" (Quelch and Laidler-Kylander, 2003, p. 1). Since the end of the cold war, the ICRC's activities have expanded considerably. As a consequence, of its increased international presence,

the ICRC has received more media attention, but as an organisation it is still poorly understood. However, there are those working within the ICRC who are unconcerned their organisation is not better understood by the general public; they believe the organisation should “have a very low profile with the media and quite a high profile with the prisoners” and victims they assist (Forsythe, 2005, p. 302).

A human rights official with the ICRC, best sums up the organisation’s unique position:

We’re admired – we’ve won Nobel Peace Prizes[1] – but we’re not liked. We have to be the one organization accepted by all sides, which means we can’t reveal what either side wants to hear (Becker, 2002, p. 1).

It is suggested this inherent tension of opposites is what makes the ICRC a successful organisation, perhaps spurring the organisation to seek creative innovations to complex problems and situations. Nevertheless:

[...] the ICRC at the start of the twenty-first century is decidedly more professional and less amateurish than ever before in its long history. It is more thoughtful about maximizing as much as possible its independence, neutrality and impartiality (Forsythe, 2005, p. 310).

Moreover, the ICRC’s ability to evolve and change has facilitated its organisational longevity. However, the complexities of its humanitarian activities make it challenging to brand and promote the ICRC effectively.

Identity, brand equity and marketing in non-profit organisations

Visual identity

Visual identity is significant in the way in which an organisation presents itself to relevant audiences; “its importance is usually sought in its relationship with corporate identity, image, and reputation” (van den Bosch *et al.*, 2006, p. 139). The elements that typically constitute visual identity are: name, logo, colour palette, font type, and perhaps a tagline; guidelines for their use should result in a consistent set of visual cues that express an organisation’s fundamental nature (van den Bosch *et al.*, 2006). Hence, the elements of visual identity are the banners for a brand. Many non-profits are increasingly aware that visual identity is the means by which to leverage their brand, which essentially reflects their organisation’s commitment and ability to fulfil their mission.

Unlike tangible products that have the advantage of providing visual cues through packaging, non-profit organisations offer “services [that] are inherently invisible before they are delivered and can only be assessed retrospectively. [Consequently, non-profit organisations must] work harder to make themselves and their services visible” (van den Bosch *et al.*, 2006, p. 142). On the other hand, trust in non-profit organisations “is substantially higher than trust in other groups such as business, government and the media” (Laidler-Kylander and Simonin, 2009, p. 57)[2]. Hence, the higher levels of trust in non-profit organisations may translate into higher levels of brand equity, which is essentially a measure of brand strength (Keller, 2003).

Brand equity and branding

Brand equity is typically viewed as the value of the brand encompassing the notions of brand loyalty, brand awareness, perceived quality and brand associations (Keller, 2003; Aaker, 2007). Many believe building brand equity should be a priority for

non-profits, as having a strong brand is as essential for non-profits, as it is for commercial organisations (Judd, 2004; Nissim, 2004; Voeth and Herbst, 2008). However, the differences between for-profit and non-profit organisations suggest that non-profits may build brand equity differently (Laidler-Kylander and Simonin, 2009). Oster (1995) outlines five areas in which non-profits differ significantly from commercial enterprises: organisational structure, human resources, collaborative focus, complex customers and mission driven. For example, the organisational structure of non-profits is typically decentralised and flatter than for-profit organisations. Employees working within non-profits are intrinsically motivated and typically derive substantial non-pecuniary benefits from their work. The notion of competition has less relevance for non-profits, and as a result, non-profits often pursue a collaborative approach with competing agencies. A non-profit's relationship with its customers is not a market-based transaction. That is, those purchasing the services (i.e. donors) from a non-profit must trust the non-profit to fulfil their mission in aiding recipients. Similar to commercial enterprises, non-profits manage their organisation by focusing on a mission; however, the role of the mission is substantially more important for non-profits. Together, these five areas form the underlying drivers of brand equity for non-profit organisations (Laidler-Kylander and Simonin, 2009).

In developing a brand equity model for international non-profit organisations engaged in development, advocacy and relief work, Laidler-Kylander and Simonin (2009) identified four key variables: consistency, focus, trust and partnerships. Brand consistency is closely allied to clarity and convergence (Keller, 2003); it is suggested brand consistency is relatively more important for non-profits due to the "greater complexity of brand audiences" (Laidler-Kylander and Simonin, 2009, p. 63). As well, "efforts to increase operational focus have a direct impact not only on brand equity, but also effects organisational legitimacy and brand positioning" (Laidler-Kylander and Simonin, 2009, p. 63). Brand trust is central to brand equity, and given "the disconnect that exists between the purchasers and users of non-profit products and services," trust is critical to non-profits (Laidler-Kylander and Simonin, 2009, p. 63). Partnerships refers to co-branding alliances between non-profit and commercial organisations, whereby high calibre partnerships may positively influence a non-profit's brand image, its potential to fund raise, and its ability to differentiate itself from competitors (Laidler-Kylander and Simonin, 2009).

Marketing strategies

As non-profits become more professional in their management practices, they are embracing marketing techniques as a means to compete more effectively for donors' share of purse. Further, non-profits "have learned significantly more about the value and techniques of marketing through cause-related marketing partnerships [with] businesses" (Knox and Gruar, 2007, p. 117). The marketing strategies of non-profits differ from commercial organisations in several important ways (Chew, 2006; Knox and Gruar, 2007). For instance, non-profits often pursue multiple non-financial marketing objectives, they typically market for social change, and they may attract more public attention, both favourable and unfavourable (Knox and Gruar, 2007). In contrast to commercial enterprises, "marketing in [non-profits is] more contingent upon a wider range of influential stakeholders" (Knox and Gruar, 2007, p. 116). As well, these stakeholders may have complex relationships with non-profits and may also be

involved in developing the non-profits' marketing strategies (Chew, 2006; Knox and Guar, 2007).

As part of their growing professional perspective, many non-profits have "begun to undertake positioning at a more strategic level in arguably increasingly challenging and competitive operating environments" (Chew, 2006, p. 341). Although political, economic and social factors may contribute to positioning, "mission is the most important distinguishing feature in [a non-profit's] positioning strategy" (Chew, 2006, p. 342). However, non-profits are progressively more aware that "simply having a *good cause* [...] will never guarantee buy-in from a target market, any more than having a *great product* will guarantee buy-in from commercial markets" (Hill, 2006, p. 59). Hence, developing an integrated marketing plan, within which the communications programme is located, has become essential for most non-profit organisations in achieving their long-term goals (Valentine and Powers, 2006).

ICRC: emblems
of humanity

227

Emblems of humanity

Established in 1863, the International Committee for Relief to the Wounded, which became the ICRC, adopted as its emblem the inverse of the Swiss flag: a red cross on a white field (Quelch and Laidler-Kylander, 2003). Since then, the Red Cross and the Red Crescent are among the most widely recognised and enduring symbols in the world (IFRC, 2006). The Movement's emblems not only identify the ICRC, the IFRC, and the National Societies, but they also extend protection to humanitarian and medical personnel, as well as buildings and equipment during times of armed conflict. "They are [emblems of protection] and their use is enshrined in international humanitarian law" (IFRC, 2006, p. 3). Thus, the emblems indicate that persons or objects displaying it are linked to the Movement and are carrying out tasks essential to the Movement's humanitarian mission. Because of their significance, there are rules regulating the emblems' use[3].

Considerable efforts are made to avoid confusion between the protective use and the indicative use of the emblems. For example, in displaying the emblems in peacetime activities every effort is made to ensure the emblems, whether displayed on persons or objects are used indicatively, by only marking their connection with the Movement and not conferring the right to protection under IHL (ICRC, 2007c). Hence, the emblems are relatively small and are not placed on armlets or roofs. However, when the emblems are used as a protective device, they should be sufficiently large to allow identification from a considerable distance; as well, the emblems must retain their original form with nothing added to the cross, the crescent, the diamond, or the white ground (ICRC, 2007c). Those working in the Movement take particular care to generate respect for the emblems from every section of society, and most importantly to reinforce their protective value (ICRC, 2007c). Thus, recognition of the Movement's emblems and their meanings must be absolutely clear if they are to serve their mission of humanitarian protection.

Red Cross and Red Crescent

The ICRC's single distinctive sign, a red cross, became an emblem of neutrality. The emblem was adopted in 1864 by the original 16 signatories of the Geneva Convention to confer legal protection on army medical services, volunteer aid workers and the victims of armed conflict (ICRC, 2007a). Although the Red Cross was meant to

remain free of religious, political or other associations, to some Muslims it was reminiscent of the Crusades. In response:

[...] the Ottoman empire declared that it would use a red crescent instead of a red cross as its emblem, although it agreed to respect the Red Cross used by the other side (ICRC, 2007a, p. 2).

The ICRC was the first to use the Red Crescent during the Russo-Turkish war between 1877 and 1878 and the emblem, which is the reverse of the Ottoman flag, was officially adopted in 1929.

Third emblem

Throughout the Movement's history, several other symbols have been proposed, [as an addition to the Red Cross and Red Crescent], [...] but only Iran's Red Lion, used until the Islamic revolution, has been allowed as an alternative to the cross or crescent (Griffin, 2005, p. 3).

In the past, the ICRC resisted petitions for another emblem, as it did not want to dilute its brand. However, it was becoming increasingly evident there was a need for a third emblem. Its creation was partly in response to finding a neutral symbol that would be acceptable to all National Societies and states, and in particular to those that wish to use neither the red cross nor the red crescent.

Unfortunately, National Societies and states that do not use either of the official emblems are not recognised:

[...] as full members of the Movement [...] [which make] it impossible for the Movement to achieve universality – one of its Fundamental Principles – and [raise] the prospect that different emblems would continue to proliferate (ICRC, 2007a, p. 2).

The concern was that:

[...] if emblems grow more specific and more numerous, they will compromise the safety of those the Red Cross has sworn to protect. While soldiers in the heat of battle can be relied on to recognize perhaps two or three symbols of protection, expecting them to identify 200 or 300 isn't reasonable (Giampietro and Smith, 2006, p. 1).

Moreover, a limited number of emblems serve as a unifying force by bringing people from a variety of countries together under a common goal.

To address these issues, it was proposed to introduce an additional emblem, which would allow the Movement to remain neutral in the twenty-first century:

It may seem madness to tamper with such a famous image, but in recent years, the Red Cross has proved more of a target than a shield [...] the Movement has been caught in the crossfire of renewed battles between symbols far older and more powerful: the cross of Christianity, the crescent of Islam and Judaism's Star of David (Griffin, 2005, p. 3).

Additional reasons for considering a new emblem were highlighted in a July 2001 review of the Red Cross brand in 15 countries by advertising agency Young & Rubicam. The study found that while the Movement "had a high status in all of the 15 countries, people weren't sure what the Red Cross actually did" (Griffin, 2005, p. 3). That is, the bodies working in the Red Cross and Red Crescent Movement were seen as trustworthy and well-recognised, but people were unsure what they did or what they were known for. More importantly, the Movement began to reassess what it was it

wanted to be known for. It was believed a new emblem would provide the Movement with the opportunity to revitalise its brand (Quelch and Laidler-Kylander, 2005).

ICRC: emblems
of humanity

Red Crystal

Among the suggestions for the new emblem were a red crystal or red diamond, red chevrons and another symbol resembling a pair of red brackets (Dowell, 2000). At the Diplomatic Conference of December 2005, the states party to the Geneva Conventions adopted the Third Protocol to the Geneva Conventions to endorse the Red Crystal. “The Red Crystal, a square standing on one corner, is being promoted as a neutral third symbol that could bridge religious differences” (Griffin, 2005, p. 3):

The crystal outline tends to suggest the shape of something wholly non-sectarian. [...] The symbol is an empty vessel, a neutral shape, a sign of sign-ness. As such, it is hardwired in our brains as something that simply means *take notice* (Giampietro and Smith, 2006, p. 1).

Availing of the new emblem, Magen David Adom (MDA), Israel’s official emergency medical, disaster, ambulance and blood bank service, was accepted as a full member of the ICRC at the 29th International Conference of the Red Cross and Red Crescent, held in June of 2006 (ADL, 2006). The Rules of the Third Protocol outline that the MDA may continue to use the Red Star of David as its sole indicative emblem within Israel. When abroad, the MDA, depending on the circumstances, may either include the Red Star of David inside the Red Crystal or use simply the Red Crystal[4].

The Red Crystal does not replace the Red Cross or the Red Crescent; it simply broadens the choice of emblems and contributes to the universality of the movement (ICRC, 2007a). Thus:

National Societies may use any one of these emblems [...] [and if a] National Society that uses the red cross or red crescent emblem as its sign of identification, may, for indicative purposes, temporarily use the red crystal in exceptional circumstances and to facilitate its work, both on national and foreign territory (ICRC, 2007a, p. 2).

Although different emblems may be used in different areas of the world, each emblem is recognised as belonging to the same Movement (Bessonette, 2003)[5].

As all three emblems have equal status under international law, it is hoped that together they will provide the Movement with a comprehensive and lasting solution. That is, by ending the proliferation of emblems it will strengthen their protective value. Moreover, the emblems should provide the ICRC and other members of the Movement with a more robust foundation on which to build marketing and communication strategies.

Marketing and communications

Over the last few years, the ICRC’s (2006, p. 34) Marketing Unit has pursued a number of large-scale research studies so as to develop its communication strategies and to more effectively raise “awareness and influence attitudes on issues of importance”. The ICRC has focused on two areas of research: examining the communication needs of key audiences, regionally and globally (ICRC, 2007a, b, c); and measuring “perceptions of and attitudes towards humanitarian action, the humanitarian environment, [as well as] the ICRC logo and emblems” (ICRC, 2006, p. 34). Since 2004, the ICRC (2006) has also participated in the annual Gallup Voice of the People omnibus survey, which measures the views of approximately one billion global citizens. The Voice of the People surveys

are inclined to focus on the ICRC's identity, as well as views and attitudes towards neutrality and independent humanitarian action (ICRC, 2006, 2007a, b, c).

Advertising campaign

The findings from the ICRC's research studies informed its 2006 print and television campaign strategy, *Abuse Grows Hatred*. The campaign focused on detention and emphasised the need to abide by the rules of the Geneva Conventions, which prohibit the abuse of detainees (ICRC, 2006). The campaign goes further, stating that abuse and torture perpetuate a cycle of violence. The animated film, created by the agency VCCP (2006, p. 1) City, "dramatises the point that the ill-treatment of prisoners breeds hatred within the families, communities and countries of the imprisoned"[6].

Online campaign

The ICRC, in May of 2008, as the official charity partner of the Union of European Football Associations (UEFA) for EURO 2008, launched an online fund raising campaign (www.scorefortheredcross.org). The campaign prompted internet users to make donations in support of the Red Cross, where each donation is transformed into virtual goals for the donor's favourite side among the 16 qualifiers for EURO 2008. The football team with the most goals wins the title of the *Most Humanitarian Team of the EURO 2008*; the campaign's winning team turned out to be Germany, followed by Spain and The Netherlands. The proceeds from the campaign are designated for the landmine victims in Afghanistan and to local projects of the 16 European Red Cross societies associated with the campaign:

This collaboration with the sporting world in a festive competition like EURO 2008 represents an opportunity for the ICRC. It lays the basis for raising the awareness of a large public in a playful way about sensitive topics of humanitarian concern, such as the situation of mine victims in Afghanistan (ICRC, 2008, p. 1)[7].

Over the past ten years, in addition to financial contributions, UEFA has given the ICRC various platforms for communicating on humanitarian topics. The UEFA web site also has a link to the ICRC site and frequently provides information about ICRC activities.

Web site

The ICRC (2007b, p. 68) web site (www.icrc.org) is available in seven languages and consultation of the web site continues to rise worldwide; "approximately 107 million page views were registered on the ICRC web site" in 2006. Peak usage of the ICRC web site typically occurs around incidents of extraordinary disaster or armed conflict. For example, in 2004 peak usage of the ICRC (2006, p. 34) web site was in March to May, due to events in Iraq and in December due to the Asian tsunami. "In the autumn of 2005, the number of hits peaked with hurricane Katrina and the South Asia earthquake". In response to operational needs and public communication requirements, the ICRC continues to add new functions, such as the launch of "the RSS feed (a system that makes it possible to deliver newly published press releases and other documents directly to people's desktops)" (ICRC, 2006, p. 34). While considerable efforts have also been made to improve the web site's editorial content so as to "strengthen the ICRC's positioning as a global and independent humanitarian organisation" (ICRC, 2006, p. 34).

Production, multimedia and distribution

“Building and maintaining credible and consistent products and an ICRC brand image” have become more important priorities over the last few years (ICRC, 2005b, p. 30). The ICRC has adopted an integrated, multimedia approach so as to respond to the changing communication environment in a more flexible and creative manner. Each year, the ICRC’s production, multimedia and distribution unit produce a number of multimedia projects to enhance awareness of ICRC operations and programmes worldwide. In 2006, the “ICRC produced some 40 print and audiovisual products and distributed more than 7,000 films and 460,000 publications worldwide” (ICRC, 2007b, p. 68). One of the unit’s more recent developments is a series of films, *From the Field*, which give an insight as what it is like for civilians living in areas of conflict (ICRC, 2007b).

As part of its communications strategy, The ICRC (2005b, p. 30) aims to “distribute institutional publications and videos effectively and efficiently, thereby ensuring that products reached target audiences within 5-6 days”. To enhance the professionalism of publications and films, “new corporate guidelines have been distributed to all delegations and headquarters staff to improve recognition of ICRC communication products by target audiences” (ICRC, 2006, p. 34). To enhance accessibility to a wider audience, many of the field videos may be viewed on YouTube at: www.youtube.com/icrcfilms

Public communications, information and translation

The ICRC’s communication division is quite extensive; and the media relations unit within that division handles a full agenda. In 2006, the unit:

[...] issued 148 press releases, 78 news reports, 139 information bulletins and 97 briefing and information notes, and organised 16 press conferences. [As well, the unit] produced and issued 11 video news items to broadcasters worldwide and produced 6 news stories for use with various target groups (ICRC, 2007b, p. 68).

The ICRC has developed its Library and Research Service to work as a public resource; its catalogue offers more than 140,000 documents (e.g. books, periodicals, videos, photos and CD-ROMs) on IHL, humanitarian work and ICRC activities. The unit responds to requests for information from a variety of individuals and organisations such as: National Societies, NGOs, academics, government departments and the media.

Given the multi-lingual nature of its work, the ICRC’s language services unit translates, edits and proof reads over seven million words each year (ICRC, 2007b). To enhance communication, the unit places considerable importance on using “the appropriate wording and language for various target audiences worldwide” (ICRC, 2005b, p. 30). Those working within the unit firmly believe coherent and consistent use of appropriate terminology are essential to the overall effectiveness of the ICRC’s (2005b) communication documents.

Challenges ahead

The ICRC’s experiential longevity is important as the nature of armed conflict is changing; the majority of present-day armed conflicts are taking place within the territory of one state rather than between states. Moreover, “the multiplication and complexity of conflicts and internal strife around the world represent a challenge to the

ICRC to maintain its rapid response capacity and avoid becoming over-stretched” (DFID, 2003, p. 11). Also, natural disasters continue to destroy the lives of many people. While diseases, old and new, cause extensive suffering and the “health services struggle to cope with increasing demands. [Still, it is] the weakest around the world [that] continue to suffer most” (Standing Commission of the Red Cross and Red Crescent, 2001, p. 9).

The ICRC’s approach for the twenty-first century is that of reflection. The ICRC has recognised their communication efforts play an increasingly important role in the organisation’s positioning and perception among various audiences. Moreover, the preservation of the humanitarian emblems’ meanings and values is a continuing consideration. Furthermore, the ICRC is exploring how new media may be employed effectively, as part of its strategic development.

Case questions

- How are the issues the ICRC faces similar/dissimilar to any other large multinational organisation? How are the organisational challenges the ICRC face affected by its participation in a network of organisations that constitute the movement?
- What are the differences, if any, in branding and positioning a non-profit organisation vs a for-profit organisation?
- How important are the Movement’s emblems to the organisational mission and strategic objectives of the ICRC? Given the extensive efforts made to avoid confusion between the protective use and the indicative use of the emblems, does this distinction in use present any difficulties to the ICRC in developing marketing and communications strategies?
- As the ICRC invests considerable resources in its marketing and communications efforts, how should it go about developing a strategy to ensure it communicates effectively about actions within the Movement, as well as as powerfully about humanitarian issues?

Notes

1. The ICRC won its four Nobel Peace Prizes in 1901, 1917, 1944 and 1963 (Forsythe, 2005).
2. Some suggest, due to the high levels of trust attributed to them, international non-profit organisations may even become the new global super brands (Woolfitt and Deri, 2001; Laidler-Kylander and Simonin, 2009).
3. The ICRC does provide manuals in using the emblems for the protection of medical transport, hospitals, hospital ships, coastal rescue craft and medical aircraft. Regulations on the use of the Emblem of the Red Cross or the Red Crescent by the National Societies may be found at: www.icrc.org/Web/Eng/siteeng0.nsf/html/57JMBG. Moreover, guidelines on the use of the Red Cross emblem and the name and logo of the ICRC for fundraising purposes may be found at: www.icrc.org/Web/Eng/siteeng0.nsf/html/5A6J7J?OpenDocument
4. Answers to frequent queries regarding the Red Crystal may be viewed at: www.icrc.org/web/eng/siteeng0.nsf/htmlall/emblem-questions-answers-281005?opendocument
5. A timeline of the emblems’ history may be found at: www.icrc.org/web/eng/siteeng0.nsf/html/emblem-history. The emblems may also be viewed at: www.icrc.org/web/eng/siteeng0.nsf/htmlall/emblem?opendocument

6. The campaign's print advertisement and the animated film may be viewed at: www.icrc.org/Web/Eng/siteeng0.nsf/html/video-spot-detention-010706
7. The video spot for the ICRC/UEFA online campaign for Euro 2008 can be seen at: www.icrc.org/web/eng/siteeng0.nsf/html/score-for-the-red-cross-ytfilm-050508
