Emerson Wagner Mainardes , and Lara Mendes Christ Bonella Sepulcri

Management, FUCEPE Business School, Vitória, Brazil

ABSTRACT

The objective of this study was to analyze studies that researched the social value of marketing, identifying the main research and the understanding of the theme. We performed a systematic literature review using the Web of Science database to select and analyze articles that investigated the social value of marketing. After the initial search with filters and exclusion criteria, the final sample consisted of 142 articles submitted to bibliometric analysis. The analysis of the literature revealed advances in the understanding of the social value of marketing. We made the connection between the four groupings of keywords and the five themes of the bibliographic coupling. This result revealed the various nuances of how the social value of marketing is addressed in the literature. The study proposes an agenda for future research, with topics such as social enterprise marketing, social value and consumers' perception, charity, cause-related marketing, ethical consumption. This study reveals the connections between marketing and social issues, indicating that the social value of marketing tends to be the result of a combination of resources, capabilities, and behaviors that link marketing and the market to social value and society.

KEYWORDS

Co-creation; social enterprises marketing; social entrepreneurship; social value; social value of marketing

Introduction

As society evolves, it is possible to notice growth in the number of people who demonstrate concerns and behaviors aimed at the collective (Razmerita et al., 2016). People with this profile usually attach importance to social value (Thielmann et al., 2020) and tend to differ from people with an individualistic profile (Sinkovics et al., 2015). This behavior was amplified by the pandemic arising from COVID-19, which led society and organizations (companies, governments, and institutions) to an important process of adaptation (Sharma, 2021). This is in line with social marketing, which deals with market beliefs and values (Kotler & Zaltman, 1971) and society, and with the premise of behavioral change (Dibb & Carrigan, 2013).

In this direction, many companies still insist on a narrow value proposition approach with a short-term vision. However, the path seems to involve creating economic, environmental, and social value at the same time (Porter &

Kramer, 2019). Social value can be considered as a value proposition for society (Bonar & Karlsson, 2019). It focuses on initiatives centered on people's well-being (Gopaldas, 2015), promoting the development of society. Such initiatives may be linked to ethical, social, and environmental issues (Bagnoli & Megali, 2011; Grieco et al., 2015).

At the same time, despite the lack of consensus in marketing studies regarding value and value proposition (Haase, 2021), marketing is evolving. Actions aimed at promoting social value have been considered functions of marketing (Bandyopadhyay & Ray, 2019) and can positively influence the behavior of consumers, investors, and other stakeholders, who become willing to support organizations that are committed to the well-being of society (Liu et al., 2018; A. Mitchell et al., 2015). In this way, this theme has gained prominence in studies that demonstrate the relationship between marketing and social value (Gao, 2020; Ghods, 2019; Gopaldas, 2015; Kipp & Hawkins, 2019; Sipilä et al., 2022; Yeoh, 2021).

However, few studies directly linked to the social value of marketing are present in the literature (Bandyopadhyay & Ray, 2019), which justifies the investigation of the subject for academic advancement and, consequently, the understanding of its importance for the market and society. Understanding the social value of marketing can allow a better understanding of the effects of social practices and ethical and environmental values, which are developed by companies in search of customers or new partners (Nascimento et al., 2021; Pomeroy, 2017; Roundy, 2017). Therefore, the question is: what are the main concepts of the social value of marketing that are present in the literature? From this question, this work aims to analyze studies that have researched the social value of marketing, identifying the main research and the understanding of the theme. For this, we carried out a systematic literature review, with subsequent bibliometric analysis, of studies published on the Web of Science (WOS) that address the social value of marketing.

The theoretical justification of the study is related to the understanding of the social value of marketing considering the view that social marketing is definitely different from traditional marketing (Kotler & Zaltman, 1971). In addition, it provides knowledge about the social value of marketing, taking into account the focus of marketing from a logic of intangible resources (Alhashem et al., 2020). A further justification for the study is that it expands the perception of the social value of marketing as an innovative approach aimed at social change (Dibb & Carrigan, 2013).

Still from a theoretical perspective, the study consolidates the literature on the subject by distinguishing itself from others that have researched specific topics, such as responsible marketing (Bandyopadhyay & Ray, 2020; Eng et al., 2020; Ghods, 2019) and social enterprise marketing (Bandyopadhyay & Ray, 2019; Bonar & Karlsson, 2019), as well as the marketing of sustainable development and the well-being of society (Chang & Chuang, 2021), marketing for

social innovation (Silva et al., 2020), green consumption (Dilotsothle & Duh, 2021), cause-related marketing (Gao, 2020), and positive marketing (Gopaldas, 2015).

As managerial and practical justifications, the study offers information that goes beyond the value proposition communication process (Ghods, 2019), addressing the relationship between marketing and social value and its impact on the market and society. With this, it is possible to expand the knowledge of managers and market professionals, envisioning the improvement of decision making. In addition, this study can provide important information for managers who wish to use marketing to raise funds for the development of social value for society and companies (Bandyopadhyay & Ray, 2020), for example, by improving working conditions and employing stigmatized workers (Gopaldas, 2015). Thus, this understanding is relevant, as it can contribute to the development of effective strategies that can encourage the practice of social value (Haase, 2021).

Literature review

Among the various marketing concepts, value is considered an important influencer of the actions of organizations and individuals (Eng et al., 2020; Haase, 2021; Karababa & Kjeldgaard, 2014; Leroi-Werelds, 2019; Porter & Kramer, 2019; Severo et al., 2019). From a practical perspective, different markets have different needs, bringing the challenge of achieving adequate positioning of the value proposition for the target audience (N. R. Lee & Kotler, 2011). Thus, there is a constant effort by organizations and entrepreneurs to strategically understand ways to propose value, both for customers and for society (Eng et al., 2020; Liang & Renneboog, 2017; Mitnick et al., 2020; A. Singh et al., 2015).

By recognizing the needs of individuals, marketing develops practices that make it possible to propose value, such as social value, which has been demanded by society (Liang & Renneboog, 2017), especially since the COVID-19 pandemic (Ratten, 2020). Marketing with social purposes, in turn, has presented new approaches and demands directed at consumers (Dibb & Carrigan, 2013) and society. In this sense, this study seeks to understand the literature on the social value of marketing over time.

Social value

Companies and their businesses have been identified as causing economic, environmental, and social problems (Porter & Kramer, 2006, 2019). In addition, the increase in the world population, combined with climate change, has aggravated social problems and intensified the scarcity of resources (Herbst, 2019). At the same time, regulations, reputation, and consumers' perceptions

of social aspects have led many companies to also direct efforts toward social value, thus developing competitive advantage (Mitnick et al., 2020; Porter & Kramer, 2006). With the COVID-19 pandemic, the relevance of shared value, that is, economic value and social value, became even more evident for companies (Lichtenthaler, 2021).

Despite the emphasis on social aspects arising from the pandemic, social value continues to be penalized in the trade-off with capturing economic value (Cavazos-Arroyo, 2020). In the field of marketing, value has been understood in different ways (Alhashem et al., 2020; Haase, 2021). Different notions of value have been used in marketing, such as exchange, functional, perceived, economic, emotional, hedonic, or social values (Karababa & Kjeldgaard, 2014). Among the values mentioned, the social value has been investigated by several researchers (e.g., Gao, 2020; Ghods, 2019; Gopaldas, 2015; Haase, 2021; Kipp & Hawkins, 2019), who seek to understand its main contributions and challenges to organizations and society (Eng et al., 2020).

Within organizations, social value can be understood as positive initiatives centered on people (Gopaldas, 2015; Karababa & Kjeldgaard, 2014; Pimentel et al., 2023). It refers to the benefits an organization brings to individual and collective well-being (Bonar & Karlsson, 2019; Bubnitz et al., 2021). These are actions aimed at improving working conditions, contracting stigmatized workers (Gopaldas, 2015), personal and professional development (Lou & Xie, 2021), growth of the local economy (Reese & Fasenfest, 1997), and encouraging conscious consumption (Pepper et al., 2009), among others. Porter and Kramer (2011) expanded the definition of social value by stating that what is good for the community is good for business; that is, for the authors, it seems feasible to develop economic value from social value.

In this way, by developing social value, it is possible to make a connection between business success and social progress (Porter & Kramer, 2019). Social value can be proposed through innovation strategies that contemplate the arrangement of resources and the search for opportunities to encourage social change (Cavazos-Arroyo, 2020). Expanding the findings by A. Singh et al. (2015), social value is linked to the proposition of social impact, taking into account the increased awareness of communities, the development of socio-economic benefits, and changes in behavior.

In following the social evolution in which consumers have demanded positive returns for society (Liang & Renneboog, 2017), marketing has evolved its focus toward intangible resources, co-creation of value, and relationships, making the service essential to the economy (Vargo & Lusch, 2004) and for business. These relationships were identified by Alhashem et al. (2020) in prosumers (a neologism derived from the union of “producer” and “consumer”), who develop social value by promoting social relationships and methods to produce, share, collaborate, and co-create with each other. Eng et al. (2020), in their research on international social entrepreneurs, stated that they

develop innovative marketing solutions to social problems through entrepreneurial activity, stimulating economic growth. Thus, marketing has invested in practices that propose benefits to society and individuals, which contributes to the construction of the concept of social value in marketing.

Social value in marketing

Faced with a scenario of changes and concern for the well-being of society, social value has gained ground in marketing discussions (Gao, 2020; Ghods, 2019; Gopaldas, 2015; Kaur & Singh, 2023; Kipp & Hawkins, 2019), since it is an area inserted in the context of social, environmental, and ethical responsibilities (Bandyopadhyay & Ray, 2019). As a strategic mechanism that contributes to business development, marketing has been seen as a continuous solution, not a one-time solution (Ghods, 2019). Muñoz and Kimmitt (2019) argued that marketing would be a reflection of an organization's activities with regard to the process of understanding and learning about the needs and demands of its customers, as well as in responding to changes in the business environment. This perspective aligned with the social value reflects the shared value, defined by Porter and Kramer (2011) as practices and policies that increase the competitiveness of a company and contribute to the social and environmental agenda in which the company operates.

In this sense, social value has been addressed by various areas of marketing, such as cause-related marketing, where it links consumer purchases to corporate philanthropy (S. Singh & Dhira, 2019). This approach can also be seen in positive marketing, which encourages managers to propose social value through effective services. Likewise, social marketing makes use of its tools for the common good (Gopaldas, 2015). And yet, macrosocial marketing recognizes the need for interventions in social problems through the execution of its fundamentals (Hamby et al., 2017).

As a result of this diversity, research related to social value in marketing is expanding, for example through studies focused on the marketing of social enterprises (Bonar & Karlsson, 2019; Ghods, 2019; Hati & Idris, 2019; Huybrechts et al., 2017; A. Mitchell et al., 2015; Okano et al., 2021). In this context, the application of marketing concepts and tools allows these companies to become more effective and achieve greater success (Chang & Chuang, 2021; Grant & Palakshappa, 2018; Hati & Idris, 2019; Liu et al., 2018). In addition, it enables the creation of new strategic positions and opportunities to expand existing positions (Porter & Kramer, 2011).

In addition to studies focused on marketing for social purposes, it is also possible to notice a relevant flow of research on social marketing (Cavazos-Arroyo, 2020; Ghods, 2019; Haase, 2021; Hamby et al., 2017; Kotler & Zaltman, 1971; N. R. Lee & Kotler, 2011; A. Singh et al., 2015). This type of marketing can be defined as the use of marketing skills and tools aimed at

social action, with an effective impact on the desired audience (Kotler & Zaltman, 1971). According to the International Social Marketing Association (2022), social marketing seeks to develop and integrate marketing concepts with other approaches, with the intent of influencing behavior to benefit individuals and communities for the greater social good. N. R. Lee and Kotler (2011) addressed social marketing as a process that uses marketing techniques and precepts with the aim of changing the behaviors, whether society or the individual (Ghods, 2019; Hamby et al., 2017).

Other marketing approaches also consider the social value. For example, responsible marketing stands out in building social value, as it points the way to justice, honesty, transparency, and incentives for the responsible use of products (Bandyopadhyay & Ray, 2019), inspiring ethical consumers, and awakening moral perspectives (Chang & Chuang, 2021). Similarly, fair trade relates to social value in marketing, as it is recognized as a strategy to guarantee a fair price that preserves the dignity of human work (Grant & Palakshappa, 2018; Huybrechts et al., 2017).

Therefore, one can see the diversity of studies in the field of marketing related to social value (Bandyopadhyay & Ray, 2019). However, the literature is presented in a dispersed and disconnected way, which highlights the importance of developing a bibliometric analysis of the literature that contributes to the systematic understanding of the various studies on the subject. It also makes it possible to understand the connections between studies, to group knowledge into themes or categories, and to propose a future research agenda.

Methods

To carry out this study, we used two methodological approaches. Initially, we performed a systematic literature review (SLR) using the WOS as a source. This source was chosen because it is composed of publications from several scientific journals recognized for publishing high-quality research, being identified as an appropriate database for several scientific areas, including the area of business management (Arrigo, 2018; Mongeon & Hus, 2016). The available information and refined search capability make WOS a suitable tool for bibliometric analysis, with possibilities for comparisons of studies (Mongeon & Hus, 2016; Saracevic & Schlegelmilch, 2021). Thus, the SLR allowed the identification and construction of a list of studies that were later submitted to a bibliometric analysis through bibliographic coupling techniques (Kessler, 1963) and keyword co-occurrence analysis (Callon et al., 1983).

Systematic literature review

To identify the articles analyzed in this study, we first performed searches on the WOS considered an important source of scientific data (Mongeon & Hus,

2016). We entered the following terms in the search engine of the database: “marketing” combined using the Boolean operator AND with the terms: “social value,” “social value creation,” “social entrepreneurship,” “social innovation,” “social enterprise,” “nonprofit” and “b corps” combined with each other using the Boolean operator OR. It is important to highlight that we considered different forms of spelling like “nonprofit,” “non-profit” and “not for profit.” In WOS, we chose the topic field, which refers to the set: title, abstract, author keywords, and plus keywords. Then, we selected the following filters: document type (article and review), category (business and management), and language (English). We did not apply the publication year filter.

This action resulted in 389 WOS articles. Next, we performed an initial analysis of the articles. We looked at the titles, abstracts, and introductions and applied the following exclusion criteria:

- (1) Unavailability of technical information about the article, such as authors, year of publication, and abstract;
- (2) Problems downloading the manuscript.
- (3) Lack of relationship with the marketing theme;
- (4) Absence of the social value theme practiced by marketing.

After this evaluation, we excluded 247 articles that met at least one of the exclusion criteria, with 142 articles remaining that made up the final sample for carrying out the bibliometric analysis. The process was systematized in [Figure 1](#).

Bibliometry

With the technical information of these 142 articles, we performed the bibliometric analysis with the aid of the software VOSviewer version 1.6.20 (Van Eck & Waltman, 2010; Waltman et al., 2010). For this purpose, we performed the keywords co-occurrence analysis technique according to Callon et al. (1983) and bibliographic coupling according to Kessler (1963). The keyword co-occurrence analysis technique considers terms that are found in the same networks and are conceptually close to each other (Mariani et al., 2022). In this way, we grouped the terms by keywords according to their degree of association, making it possible to identify which terms were used most. We emphasize that the keywords initially used in the WOS search engine were not considered in this procedure. In addition, when using the software, we verified the existence of words with the same meaning but written differently, unifying them in the same term.

The bibliographic coupling technique measures the degree of similarity between articles by reading the number of shared references (Kessler, 1963; Mariani et al., 2022). That is, if two or more articles refer to another article, it

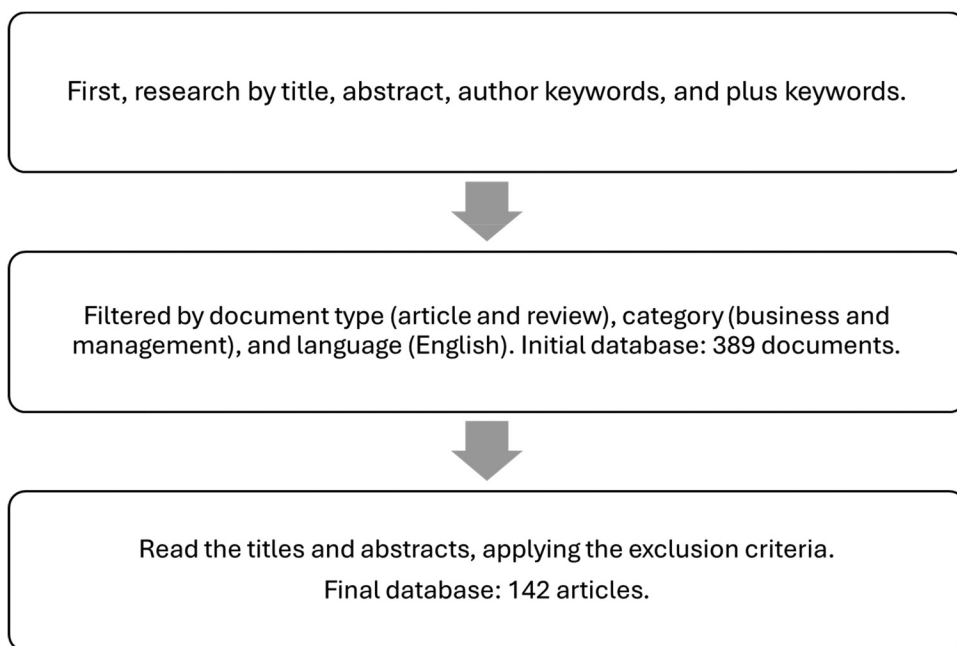

Figure 1. Systematic process. Source: Own elaboration

means that they are bibliographically linked through the latter. Therefore, the more references that articles share, the more similar these articles are to each other (Kessler, 1963). Thus, through shared references, similar articles form clusters, which are identified by color, indicating research paths to be studied (Jarneving, 2005).

To present the result of applying these techniques, we used network maps (H. Li et al., 2016). The maps are calculated by measuring the strength of interaction between the terms, which, in turn, takes into account the number of links between them (Van Eck & Waltman, 2010; Waltman et al., 2010). Carrying out a graphical analysis, the nodes, connected by lines, represent articles or keywords, depending on the technique used. The larger the node, the more relevant the term compared to smaller nodes. And the closer the nodes are to each other, the greater their relationship is to each other.

Results of bibliometric analysis

Co-occurrence keywords

To identify the main concepts of the social value of marketing present in the literature, first, we applied the co-occurrence technique to all the keywords found in the 142 studies, with fractional counting, finding 940 keywords in all. Next, we verified the possibility of synonyms between the terms, finding 90 synonymous words. Then, the criterion of at least 5 occurrences was

established, which resulted in 65 items, all related to the theme of the social value of marketing. Next, we removed the keywords “marketing,” “social value,” “social entrepreneurship,” “social enterprise,” “b corps” and “nonprofit” as they were initially used by the search engine. Thus, there remained 60 keywords representing the main subjects investigated in WOS studies referring to the social value of marketing. From there, the program provided four sets of keywords, as shown in Figure 2. One point to highlight is that just a few papers explicitly related with B corps have been found (Bianchi et al., 2020; Lepkowska-White et al., 2022), which suggest this as an emerging theme.

We formed Group 1 from the terms “entrepreneurship,” “co-creation,” “sustainability” “business” and “value creation.” Studies connected to these subjects are tied to the context in which organizations structure their strategies. These strategies aim to simultaneously attract consumers while addressing social issues, thereby creating economic and social value for the business (Lichy et al., 2023; Purohit & Gupta, 2023; Seleznova et al., 2020). Bublitz et al. (2019) sought to identify key marketing practices that increase enterprises’ success in the local and community context. In this way, social value can be observed through a co-creation approach, linking different players to discuss and interpret market concepts (Sigala, 2019). Going further, such studies are

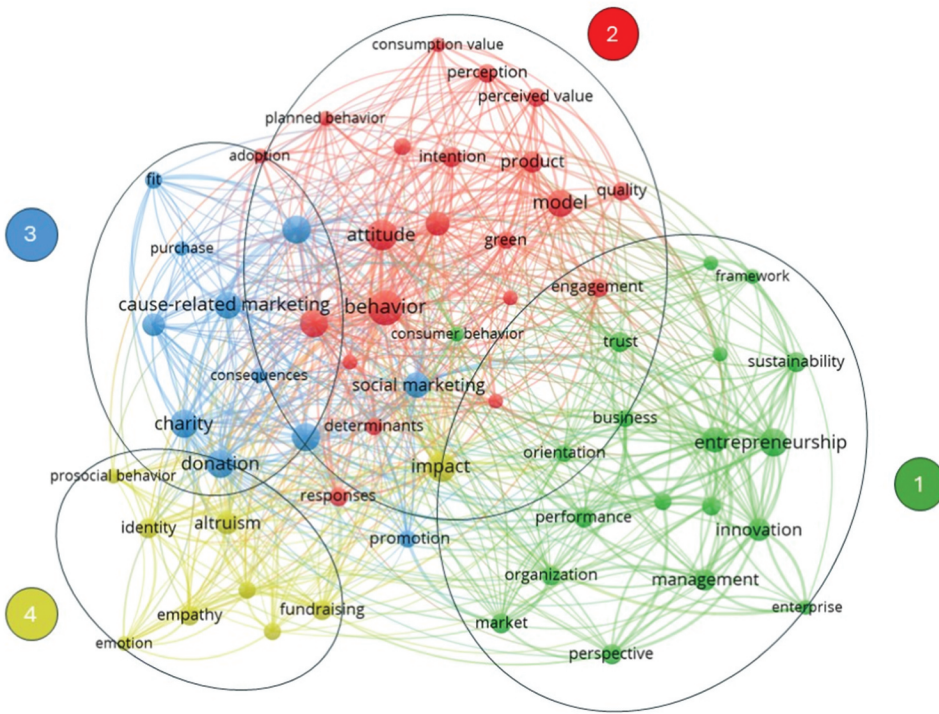

Figure 2. Grouping by keywords. Source: Research data.

linked to the effect of the co-creation of value on consumer behavior (F. Xu et al., 2021), which can affect, as a consequence, the business model and the economic value. In addition, tackling poverty and its consequent problems can be enhanced through initiatives such as social entrepreneurship, generating social impact (Bloom, 2009). Understanding co-creation helps to understand how social enterprises co-create to simultaneously address social and economic issues (Silva et al., 2020). It is interesting to note that the keyword “consumer behavior” belongs to this group but is positioned in the middle of Figure 2, connecting with other groups. It can suggest that researchers are interested in observing changes in consumer behavior to understand how the consumer is becoming more sustainable and how sectors can address these sustainable values (Essiz & Senyuz, 2023; Gadeikiene & Svarcaite, 2021).

Moving forward, the keywords constituting Group 2 were “attitude,” “behavior” “perceived value” “engagement,” “determinants,” and “green.” A common point connecting these keywords is the focus on studies that explore the determinants influencing intentions, attitudes, and behaviors related to supporting social causes or consumer engagement in practices that benefit society and the environment (Achabou et al., 2020; Lithopoulos et al., 2018; Ravi et al., 2022; Suki et al., 2022). For example, studies investigate the antecedents of food donation (Habib et al., 2023), boycott behavior (Mizukoshi, 2023), re-engagement in sharing economy practices (S. Y. Li et al., 2024) and purchase intention of social enterprises (Tsai & Lu, 2023).

The terms forming Group 3 are “nonprofit organization,” “social marketing,” “cause-related marketing,” “corporate social responsibility” and “donation.” The link between these terms can be explained by the alignment of research that addresses social practices in the adoption of cause marketing strategies, to promote social impact and influence the change/transformation of consumer behavior toward responsible actions (e.g., Kipp & Hawkins, 2019; Purdy, 2020). Through corporate social responsibility (CSR), traditional businesses and entrepreneurs can also benefit from understanding how social enterprises develop sustainable market opportunities and provoke behavioral changes (Bandyopadhyay & Ray, 2019; McWilliams et al., 2011). Understanding cause-related marketing can also enable nonprofit organizations to employ more effective strategies to incentivize customers to donate or purchase their products in support of the cause (D. Li & Atkinson, 2020; Rego et al., 2021).

Finally, Group 4 was composed of the word “identity,” “altruism,” “fundraising,” “prosocial behavior,” and “empathy.” The keywords in this cluster connect articles that explore the influence of emotions in contribute with nonprofit or social organizations (Merchant et al., 2011; Small & Verrochi, 2009; Sudhir et al., 2016). In this way, Allred and Amos (2018) showed the difference of disgust and nondisgust images to evoke empathy or donation intentions in advertising campaigns. Septianto et al. (2019) highlight the

importance of personalized campaigns in achieving donations and prosocial behavior. The authors explain how combined characteristics of individuals, such as moral emotion, moral judgment, moral identity, and demographic factors, can influence the intention to donate time and money, thus underscoring the significance of this understanding for the success of marketing strategies. It is interesting to note that most of the research involving emotions concentrate on advertising campaigns.

The map formed (Figure 2) indicates the relationship between the closest terms and the emergence of a network linked by them. Looking to the middle of the Figure 2, it is possible to observe the nodes that connect the sets of terms: “social marketing,” “consumer behavior,” “determinants,” “impact,” “responses” and “promotion.” All these terms that are somehow associated with the antecedents and outcomes of social value of marketing and how consumers are responding to this company’s practices and policies. This interconnection contributes to the analysis of the main concern of this subject.

Bibliographic coupling

We applied the technique of bibliographic coupling by documents with fractional counting and at least one citation, in order to identify the interactions between the studies based on the similarities of subjects between the references (Perianes-Rodriguez et al., 2016). In this way, the VOSviewer software generated a map that illustrates the five clusters, which were identified as having similar subjects, as can be seen in Figure 3.

Cluster 1 presents studies related to social enterprise marketing, a topic that discusses how social entrepreneurs use marketing to influence consumers (Bublitz et al., 2021; Muñoz & Kimmitt, 2019). This can be seen in the study by Bublitz et al. (2021), which presented a structure focused on identifying marketing practices for the success of social enterprises. The growth of social enterprises has been a social, cultural, and economic trend, and social marketing is part of the strategies of these enterprises (A. Mitchell et al., 2016). In this sense, the arrival of innovative social enterprises demonstrates an alternative way to achieve social change through a focus on creating shared value (A. Mitchell et al., 2015). Furthermore, Muñoz and Kimmitt (2019) addressed how social purpose can have a strategic influence on the development of the economic element of the business. On the other hand, Toledano and Riches (2014) explored how nonprofit and for-profit brands can collaborate in an event for social causes. Besides the alignment can contribute to the success of the campaign this strategy can come with potential risks to not compromise the nonprofit goals with commercial interests.

Cluster 2, in turn, gathered studies that discussed the social value influence on consumers’ perception. Bianchi et al. (2020) investigated the motivations for purchasing from B corps, identifying social and

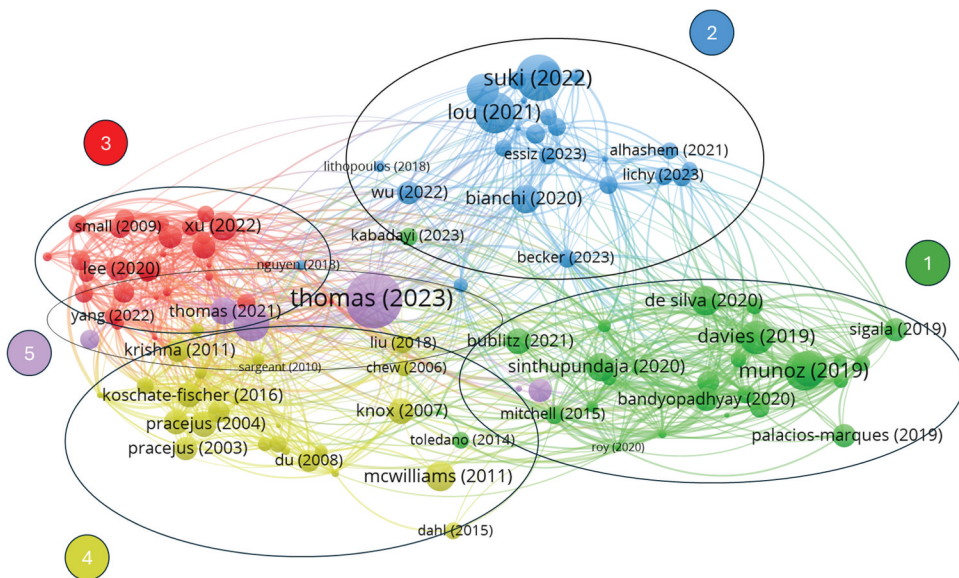

Figure 3. Bibliographic coupling by article. Source: Research data.

environmental values as the main causes. Besides, according to Suki et al. (2022), social value is also considered by consumers of organic food. Recently, Lou and Xie (2021) demonstrated the different impacts of social value on the consumer experience of YouTube channel videos, depending on the involvement level with products. Even with restrictions, service co-creation was also able to deliver social value during the COVID-19 pandemic (Sharma, 2021).

Cluster 3 considers matters related to charity. The articles investigate how emotions appeal (Small & Verrochi, 2009), political orientation (Y. Lee et al., 2020), financial behavior, pandemic, public policy (Van Steenburg et al., 2022), engagement in a creative activity (L. Xu et al., 2022) and pregiving incentives (Yin et al., 2020) affects donor behavior. Jaw et al. (2023) investigates prosocial behavior and conclude that both, nonprofit and for-profit organizations, can benefit from mitigating the effects of participation costs by increasing the self -benefit/other -benefit incentives. Also, storytelling can be a powerful strategy to nonprofits communicating with the target audience and achieved their strategic purposes (S. L. Mitchell & Clark, 2021).

Cluster 4 presents studies mainly discussing cause-related marketing (CRM). To succeed in this kind of strategy, it is important to observe some characteristics as the fit between the sponsor brand and the cause (Pracejus & Olsen, 2004; Rego et al., 2021), the donation amount, and the company's reputation (Koschate-Fischer et al., 2016). In terms of international marketing, CRM can even be a way of increasing

recognition, and brand trust, and leveraging product evaluation (S. Singh & Duque, 2020). However, depending on how applied, CRM can decrease donations and consumers' happiness as it can be perceived as more selfish than direct donations (Krishna, 2011).

Finally, Cluster 5, which is the smaller cluster, contemplates the discussion of ethical consumption and consumerism. According to O'Shaughnessy and O'Shaughnessy (2007), marketing does not necessarily originate consumerism, but it can certainly encourage it. In this context, the authors advocate for an ethical debate that aligns with consumer satisfaction – a viewpoint that resonates with Varey's (2010) proposal for welfare-centric marketing practices. In this way, three main strategies were identified regarding the use of CRM to responsible consumers: personalizing the cause, using founders' stories to authorize consumer action, and creating a market for responsible "development consumers" (Kipp & Hawkins, 2019). To understand consumer psychology and the motivations of consumption, some researchers exploring the effects of personality traits on CRM participation intention (Patel et al., 2023) and intention to donate money (Thomas & Jadeja, 2021).

In addition to the map with the demarcations of the clusters with their respective studies, we created Table 1 to demonstrate the studies that were most cited within each cluster. This table shows the authors, the main theme, the cluster, the number of citations of each study, and the number of citations per year.

Table 1. Bibliographic coupling by cluster.

Authors	Subjects	Cluster	Citations	Citations/ year
Muñoz and Kimmitt (2019)	Social Enterprise Marketing	1	76	15.20
Bhatt and Altinay (2013)			60	5.45

Relationship between analyses

By observing the co-occurrence and bibliographic coupling analyses, it is possible to notice a convergence. Group 1 (keywords “entrepreneurship,” “co-creation,” “sustainability” “business” and “value creation”) integrated into the “social enterprise marketing” and “social value and consumers’ perception” cluster. This is evidenced by A. Mitchell et al. (2015, 2016). who discuss marketing strategies in the context of social marketing within social enterprises. Roy and Goswami (2020) advocated an integrated model of social enterprise and social marketing. Nascimento et al. (2021) developed a model adopting three approaches to marketing strategies for social enterprises: commercial, social, and corporate.

Besides these, Bandyopadhyay and Ray (2020), for example, brought arguments related to the appropriation of marketing strategies in social companies, that is, social businesses, aiming at social change. Also, Prior (2013) highlighted the consumer’s perception of value in relation to social solutions using ethnographies to find the results. Sharma (2021), in turn, combined the perspective of the customer and the company in the context of services to address value creation and co-creation and stated that the result of the co-creation of services is found in the social, economic, and experiential values created. Common studies indicate the use of entrepreneurship and social responsibility in the context of low-income countries or communities, moving toward social entrepreneurship, aiming at generating positive externalities, such as Bhatt and Altinay (2013), Bublitz et al. (2019), Bublitz et al. (2021), and Muñoz and Kimmitt (2019).

When analyzing Group 2 (keywords: “attitude,” “behavior” “perceived value” “engagement,” “determinants,” and “green”) the keywords are partially explicated to cluster “social value and consumers’ perception” as Ravi et al. (2022), for example, explain the importance of emotional values to enhance the acceptance of social enterprise products. However, this keyword group is also related with cause-related marketing cluster, as it encompasses papers that explore consumers responses to different Caused-Related Marketing (CRM) strategies (Ndasi et al., 2022). Even if the keyword “caused-related marketing” belongs to Group 3, is possible to note that the keyword groups 2 and 3 have interactions as they share borders. Also, some studies are related in the frontier of keywords Group 3, discussing CSR strategy. For example, Gao (2020) and Kopalle et al. (2022) showed that the influence of cause related marketing as one of the CSR strategies effectively adopted by companies, benefiting for-profit firms and larger donations.

Group 3 (keywords: “nonprofit organization,” “social marketing,” “cause-related marketing,” “corporate social responsibility” and “donation”) indicated that it was integrated into the “charity” cluster, as this keyword also belongs to this group. This cluster strong explore donors’ behaviors which is

close related with nonprofit organizations (for example: Van Steenburg et al., 2022; L. Xu et al., 2022; Yin et al., 2020). Also here, in parts, the articles in this cluster can be related in the frontier with keywords Group 4 (keywords: “identity,” “altruism,” “fundraising,” “prosocial behavior,” and “empathy”), as an examples of White and Peloza (2009) discussed effective ways to positioning certain appeals according to type on donor support, integrate in this way keywords as “charity” and “altruism,” thus, the emotional aspect is also explored (Small & Verrochi, 2009).

However, in the middle of keywords’ Group 3 we can see “cause-related marketing” keyword, which link this group with “cause-related marketing” cluster, relating with studies that explore, for example, how CRM affects advertising (Ndasi et al., 2022), brand attitudes and purchase intention (Rego et al., 2021), and brand trust (S. Singh & Duque, 2020). Another connection for Group 3 is ethical consumption cluster, as this cluster is in the middle of Caused-Related Marketing cluster and Charity cluster (Figure 3). In this way, ethical consumption gather keywords as “cause-related marketing,” but also “trust” (Thomas & Jadeja, 2021; Thomas et al., 2023); ethical consumption (Kipp & Hawkins, 2019) and “marketing ethics” (O’Shaughnessy & O’Shaughnessy, 2007).

In addition, marketing in social enterprises emerges in different situations from traditional marketing (Bandyopadhyay & Ray, 2020), because the lack of resources and capabilities impel the search for the improvement of social entrepreneurship and CSR. On the other hand, in times of crisis, the social economy is considered as the option that delivers the best response, and, therefore, social enterprises play a fundamental role in the pursuit of sustainable growth (Palacios-Marqués et al., 2019).

This is because the social issue, closely related to improving social well-being, contemplates social change (Nascimento et al., 2021). Social change, in turn, happens through social entrepreneurship (Bandyopadhyay & Ray, 2020; Bublitz et al., 2021), CSR (e.g., Gao, 2020), and the birth of new business models (e.g., Akinboade et al., 2023). And these new business models constitute a primary logic of enterprises for the creation of value (Nascimento et al., 2021; Silva et al., 2020).

Discussion

With the evolution of the social theme in marketing research, it was possible to advance our understanding of the social value of marketing. Going further, the connections and understandings developed in this systematic review resulted in associations that help to develop the social value of marketing. An example is the connection between Group 1 (“entrepreneurship,” “co-creation,” “sustainability,” “business” and “value creation”) to Cluster 1 (social enterprise marketing). This cluster aggregates twenty-nine studies from 2015 to 2023.

Akinboade et al. (2023), Bublitz et al. (2021), Davies and Doherty (2019), and Muñoz and Kimmitt (2019) addresses challenges of value creation to social, nonprofit or hybrid enterprises and the strategies needed to manage between economic, social and environmental value. Group 1 is also associated with Cluster 2 (social value and consumers' perception). This cluster is formed by twenty-five studies that discuss different ways of proposing value to customers, suppliers, and society. The studies were published between 2013 and 2024, demonstrating the novelty of the subjects.

In this cluster, studies by Gadeikiene and Svarcaite (2021) and S. Y. Li et al. (2024) highlighted the consumers' perception of value in relation to sharing economy. Li et al. concludes that it is important to align sharing economy practices and sustainability to attract more conscious consumers. Suki et al. (2022) and Essiz and Senyuz (2023), based on Theory of Consumption Values, explored the impact on value perceptions on consumers' purchase intention of organic food and luxury products, respectively. Sharma (2021) approached co-creation as the focus of their studies, in which the participation of consumers in the construction of value was analyzed. Furthermore, connection, trust, and commitment are dimensions of co-creation (F. Xu et al., 2021) that can impact the value proposition, the business model, and, consequently, the economic value, in order to influence the understanding of the social value of marketing. Briefly, these studies point to marketing practices that are used for the success of social enterprises (Bublitz et al., 2019; Palacios-Marqués et al., 2019).

Another understanding of the social value of marketing can be observed in the connection of Group 2 ("attitude," "behavior" "perceived value" "engagement," "determinants," and "green") with Clusters 2 (social value and consumers' perception) and 4 (cause-related marketing). The Cluster 4 consisted of 25 studies from 2004 to 2022. From both clusters discussions related to social value studies bring reflections on how communicate it (Becker et al., 2022) as well as their influence on purchase intention, green consumption, and brand loyalty (Dilotsothe & Duh, 2021; Lou & Xie, 2021; Ravi et al., 2022; Suki et al., 2022). Through these studies, it is possible to perceive that social well-being is also developed by social companies that have as a business priority the achievement of social goals, aiming at solving a social problem (Silva et al., 2020). Going further, improved social welfare is a consequence of social change (Woodside, 2018), and such change, at the macro level and in the long term, happens through alliances between social enterprises and other organizations (Srivetbodee et al., 2017). In this context, the social value of marketing manifests itself through social enterprise marketing, contributing to the promotion of services and/or products aligned with the interests of society (Bandyopadhyay & Ray, 2019; Ghods, 2019).

When analyzing Group 3 ("nonprofit organization," "social marketing," "cause-related marketing," "charity," "corporate social responsibility" and "donation"), we see studies mainly on Cluster 3 (charity). This cluster gather

30 studies from 2000 to 2022, showing that third sector is well explore in terms of generate social value. The studies discussed ways to nonprofits differentiate and get funding to apply in diverse causes (Y. Lee et al., 2020; Van Steenburg et al., 2022; White & Peloza, 2009; L. Xu et al., 2022). This discussion and how donor behavior is changing have been catching the attention of researchers over time.

On the other hand, social value, which is recognized as benefits developed for people and society (Bonar & Karlsson, 2019; Bubnitz et al., 2021), is part of the construction of CSR (Hemingway, 2005). From the CSR perspective, social entrepreneurship sees social problems as opportunities, developing processes that generate profits for the company and, at the same time, create social value for society (Tasavori et al., 2016), reducing poverty, for example, and generating social impact. In this context, papers on Cluster 4 explores CRM and nonprofit organizations (Du et al., 2008; Koschate-Fischer et al., 2016; S. Singh & Duque, 2020). In this way, cause-related marketing has been used to promote companies that act with social responsibility (Gao, 2020), in addition to making it possible to reach donors willing to invest in social well-being (Eng et al., 2020). All these discussions contribute to the understanding of the social value of marketing.

Advancing in the understanding of the social value of marketing, we also observe the result of the association of Group 3 with Cluster 5 (ethical consumption) which explores, for example, how social value is create based on reflections of ethical consumption through CRM (Kipp & Hawkins, 2019; O'Shaughnessy & O'Shaughnessy, 2007). This is the smallest cluster composed of 8 studies from 2007 to 2023. The other studies point out influences of trust and psychological process on CRM (Patel et al., 2023; Thomas & Jadeja, 2021; Thomas et al., 2023) and at least, Varey (2010) proposed an agenda discussing CSR and how marketing can support a transaction from consumerism to a more responsible and sustainable society. The author suggested that the adoption of social responsibility in marketing concepts and practices would be a breakthrough in this theme. Thus, the interdependence between marketing and sustainability through the social value of marketing goes beyond and brings benefits to the economy, generating jobs and developing regions and countries (Tasavori et al., 2016; Tudu, 2020).

Social enterprises seek to fulfill society's desire to generate positive externalities, such as reducing poverty and violence and improving health and education. Often these results are achieved through entrepreneurial strategies to create social value, being related to social entrepreneurship (Smith et al., 2012; Tasavori et al., 2016) Varey (2010) suggested that the adoption of social responsibility in marketing concepts and practices would be a breakthrough in this theme. So, considering that large companies have expanded their activities in social matters (Porter & Kramer, 2011) and, at the same time, social enterprises are using marketing in an innovative and responsible way

(Bandyopadhyay & Ray, 2019; Pomeroy, 2017), it is understood that the social value of marketing emerges from that, impacting individuals and their behaviors toward the amplification of shared value and social welfare.

Therefore, the social value of marketing results from the combination of resources, capabilities, and behaviors that link marketing and the market to social value and society, such as the use of alliances and networks, long-term vision, capabilities to transform and reconfigure business models and companies, innovation, and co-creation. All this brings together and interconnects marketing with sustainability. After analyzing 142 articles on topics related to the social value of marketing through different methods, it was possible to verify the importance of the emergence of business models arising from the changes provided by social entrepreneurship and CSR, strengthening aspects of value creation.

The main beneficiaries of these changes are the vulnerable populations of low-income and undeveloped countries (Jagdale & Santos, 2022; Wu et al., 2021). It is worth highlighting here the benefits brought toward the well-being of these populations. The interdependence between marketing and sustainability through the social value of marketing goes beyond and brings benefits to the economy, generating jobs and developing regions and countries (Tasavori et al., 2016; Tudu, 2020).

Research agenda

The purpose of this study was to analyze studies on the social value of marketing, identifying concepts, understandings, and research related to the theme. One of the arguments was that the understanding of the social value of marketing can open ways to understand the effects of social and environmental practices in the companies' search for consumers or partners (Nascimento et al., 2021). For this reason, there are several opportunities for future research involving the social value of marketing. Thus, this systematic review of the literature revealed the interdependence of different themes connected with marketing, social value, and the social value of marketing. Moving forward with suggestions for future research, Table 2 shows possibilities for future research by subject and by cluster according to bibliographic coupling.

When analyzing Table 2, the main suggestions that were proposed in the most recent articles (since 2019) analyzed in this study are detailed. We noticed that, among the studies that formed cluster 1 (Social Enterprise Marketing), the main research suggestions are related to the business model, social transformation, organizational performance, and emerging countries. Cluster 2 (Social Value and Consumers' Perception) has suggestions that are linked to responsible behavior, positive marketing, environmental concern, loyalty, perceived value and sharing

Table 2. Suggestions for future research.

Cluster	Subject	Research suggestions
Social Enterprise Marketing	Business model	Studying commercial enterprises that use complex adaptive business model approaches to create sustainable competitive advantages (Akinboade et al., 2023).
		Developing quantitative studies that test the financial and/or social success of social enterprises that apply complex adaptive business model strategies (Akinboade et al., 2023).
		Developing interdisciplinary research, such as marketing and education, investigating the impact of educational policies and curricula on social entrepreneurship literacy (Bublitz et al., 2021).
	Social Transformation	Understanding how hybrid organizations manage social and commercial objectives (Davies & Doherty, 2019)
		Investigating the role and impact of market capabilities on value co-creation, measuring the short- and long-term impacts and results of social value co-creation (Sigala, 2019).
		Identifying the contextual factors and actors that determine the development and impact of market capitalization skills on the co-creation of social value (Sigala, 2019).
		Investigate mechanisms that facilitates co-creation between social enterprises and its partners across economic pyramid (Silva et al., 2020)
	Organizational performance	Analyzing the relationship between marketing capabilities and strategic marketing approaches, developing and validating tools to measure performance and social impact (Nascimento et al., 2021).
		Analyzing how each strategic marketing approach can effectively innovate the business model of compensatory/transformational social ventures (Nascimento et al., 2021).
		Analyzing the barriers and enablers for transformational services initiatives (Kabadayi et al., 2023)
Social Value and Consumers' Perception	Emerging countries	Exploring the impacts of different governance structures and strategies on hybrid organizations and their ability to capture value (Davies & Doherty, 2019)
		Exploring the specific use of social marketing within social enterprises and extending research into marketing and social marketing practices used by social enterprises in various parts of the world (A. Mitchell et al., 2015).
		Exploring the differences between strategic conditions in emerging countries (Muñoz & Kimmitt, 2019)
	Responsible behavior	Exploring how the integration of innovative and eco-friendly materials can be accepted by the target audience (Achabou et al., 2020).
		Exploring antecedents of sustainable luxury consumption in different demographic and cultural context (Essiz & Senyuz, 2023)
		Exploring Consumer styles inventory (CSI) in different context and industries (Lichy et al., 2023)
	Positive marketing	Investigating marketing strategies for b corps considering the consumers motivations to purchase (Bianchi et al., 2020)
		Exploring how different variables such as prior donation experience influences attitudes and intentions to support social enterprises (Becker et al., 2022)
		Including sociodemographic variables to further understand consumer ethical decision-making toward sustainable development (Chang & Chuang, 2021).
	Environmental concern	Investigating factors that influence the choice of green products by middle-class black consumers (Dilotsothe & Duh, 2021).
	Loyalty	Investigating the role of social value in brand building when content marketing is targeted at members of a distinct affinity group or consumer club (Lou & Xie, 2021).
		Exploring the long term impact loyalty on CSR (Wu et al., 2022)

(Continued)

Table 2. (Continued).

Cluster	Subject	Research suggestions
Charity	Perceived Value	Examining communities of prosumers, online or offline, dedicated to particular interests such as sewing, cooking, or car maintenance (Alhashem et al., 2020). Discovering and examining in more detail the different types of prosumers, including the types of values they generate and what they can mean for the continued evolution of marketing and consumer culture (Alhashem et al., 2020). Investigating how a company can measure value results from the co-creation process considering the company and other stakeholders (Sharma, 2021). Pointing out how a company can evaluate and reward customer participation in winning new customers through reviews, service support, and sharing ideas for new service projects (Sharma, 2021).
	Sharing Economy	Exploring sharing practices, as C2C, and the long-term effects of consumer reflexivity on behavior in this kind of consumption (S. Y. Li et al., 2024)
	Donations diversification	Exploring potential impacts of creative activities in different forms of donation, such as time or goods (L. Xu et al., 2022).
	Fundraising	Understanding the application of pregiving incentives on digital fundraising strategies (Yin et al., 2020) Testing the conceptual framework that adapted marketing and fundraising strategies post COVID-19 (Van Steenburg et al., 2022)
Cause-Related Marketing	Consumer behavior	Exploring the long-term effects of storytelling on behavior of consumers and volunteers (Mitchell & Clark, 2021) Understanding the role storytelling strategies on digital media, comparing across different nonprofit sectors (Mitchell & Clark, 2021)
	Price	Exploring factors that might affect consumers perception of price fairness in CRM context (Koschate-Fischer et al., 2016).
	Regulator context	Understanding the effects of the regulator on strategic decisions of charitable donations (Kopalle et al., 2022)
	Effectiveness	Exploring the impact of digital marketing strategies on donor behavior and charity support (Krishna, 2011). Exploring moderation variables such as perceived sincerity and cause involvement on internet CRM effectiveness (Ndasi et al., 2022) Understanding the impact of CR and sponsorship ads on companies versus nonprofit organization websites (Ndasi et al., 2022) Studying the impact of supply chain structure on the effectiveness of pure philanthropic corporate initiatives or other types of CSR activities (Gao, 2020).
Ethical Consumption	Responsible consumption	Exploring the effects of variables such as brand familiarity, spatial distance and product type's influence on the effectiveness of CRM campaigns (S. Singh & Duque, 2020). Investigating the trend toward "new development responsibilities," particularly as it relates to neoliberal consumerism (Kipp & Hawkins, 2019). Understanding alternatives that more effectively engage communities in the Global South (Kipp & Hawkins, 2019)
		Exploring additional factors influencing donation behavior in the CRM context (Thomas et al., 2023).
	CRM	Exploring moderator factors between trust in CRM campaigns and donation intention (Thomas & Jadeja, 2021) Exploring moderator factors between personality traits and CRM participation intention (Patel et al., 2023)

Source: Own elaboration.

economy. Regarding Cluster 3 (Charity), the studies presented suggestions on donation, on social cause, social change, and social initiatives. Cluster 4 (Cause-related Marketing) had studies with the main suggestions based on CRM and price, regulator context, or effectiveness. And finally, Cluster 5 (Ethical Consumption) was formed by studies that, for the most part, suggest more research that deals with responsible consumption and CRM.

Briefly, the suggestions that appear in the studies are linked to environmental and social issues. These are suggestions of themes that can influence the well-being of society, such as social initiatives and responsible and environmentally friendly behavior. We suggest investigations of marketing practices that can benefit organizations focused on these causes. These research possibilities are aligned with topics such as sustainability and the ESG agenda in organizations, enhancing the interconnection of research in these different areas of knowledge.

Conclusion

To meet the objective of this study, themes related to the social value of marketing were explored with the formation of connections and discussions that allowed the analysis of this concept. As a theoretical contribution, the study demonstrated that the theme of social value in marketing has its basis in social enterprise marketing, social value and consumers' perceptions, charity, CRM and ethical consumption. Each of these topics was investigated separately, resulting in a future research agenda. In addition, this study broadened the perspective of marketing through an intangible resources' perspective (social value, co-creation, etc.), as suggested by Alhashem et al. (2020), from the systematization of knowledge about the social value of marketing.

As a practical implication, this study contributes to the gathering of information, pointing out studies on the use of marketing by social enterprises (Herbst, 2019; Nascimento et al., 2021; Roy & Goswami, 2020) and the development of social entrepreneurship (Bandyopadhyay & Ray, 2019; Bublitz et al., 2021). It also presents studies that investigate the participation of customers in the construction of value (S. Y. Li et al., 2024; Seleznova et al., 2020; Sharma, 2021) as well as studies that discuss the importance of creating alliances and networks to transform and reconfigure business models (Akinboade et al., 2023; Bublitz et al. 2021; Davies & Doherty, 2019; Muñoz & Kimmitt, 2019). In this way, this study gathers research data related to the social value of marketing that can contribute to the decision making of managers and marketing professionals (Dibb & Carrigan, 2013; Varey, 2010), in addition to providing conceptual, methodological, and thematic guidance for those interested in the topic.

Despite the theoretical and practical contributions, this study has some limitations. As this review used only studies from the WOS database, some surveys may not have been considered, such as studies available only on the

Scopus database. Another limitation was the high concentration of studies on social entrepreneurship, which may have influenced the formation of connections and groupings resulting from the analyses. Also, when using the term “marketing” in the search part of the database used, searches were limited to this area only. However, when advancing the understanding of the social value of marketing, this study highlighted the various nuances of the theme, contributing so that companies, social enterprises, researchers, managers, and professionals can develop strategies to reduce poverty and increase social value through marketing.
